

VSM®3005-R &
VSM®5005-R

Fully automatic vacuum
packaging with the
VSM® System

VSM® SYSTEM

The VSM® system uses special suction nozzles to evacuate the product directly within the bag. This guarantees a gentle, but at the same time, high-quality vacuum.

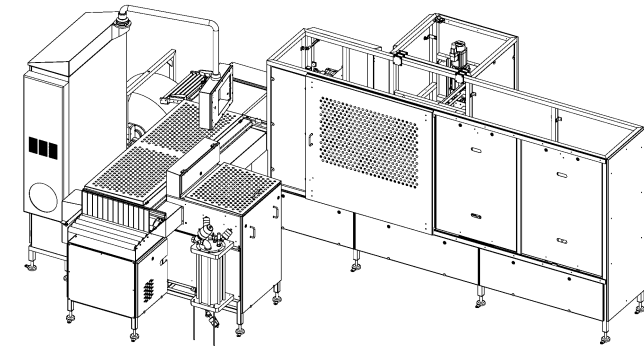

This evacuation procedure results in a number of benefits with regard to product quality, product shape, vacuum safety, handling and resource efficiency.

The fully automatic vacuum packaging machines are characterised by an automatic bagging station with taped bags on roll, as well as the subsequent fully automatic vacuum sealing and welding with the VSM® system.

Leveraging our talents to your advantage

Demand for highest quality and precision with our in-house production and purchased parts means that all machines of MBM innovations GmbH are characterised by their long lives and reliability.

With our comprehensive standard range of VSM® vacuum packaging machines as well as the option for **individual adaptation** and the development of special versions, we are able to find the perfect solution for every customer requirement!

VSM® 3005-R

Product quality

- Optimum maintenance of shape & stability
- Reliable vacuum for long-life
- Gentle on sensitive product structure

Packaging quality

- Wrinkle-free welding seam even with wet bags
- No shrinking required
- Reliable and bi-active impulse welding

Resources

- High energy efficiency
- Small vacuum pumps (no vacuum chambers)
- Compact packaging material

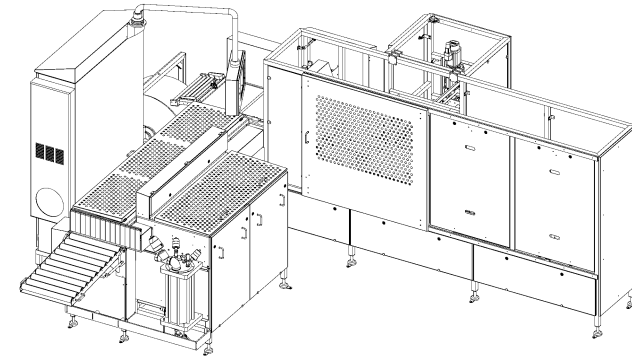

VSM®3005-R

Concentrated competence and performance strength: The VSM®3005-R is the efficient and high-performing solution for fully automatic packaging.

Technical data:

Vacuum station	1
Performance	up to 5 packages/ minute
Welding length	max. 500 mm optional: double welding seam
Standard product size	EURO Block
Dimensions	5290 x 3440 mm

From development through to manufacturing and after-sales-service, we offer high-quality complete solutions from a single source!

VSM® 5005-R

VSM®5005-R

Perfection in service and performance: The VSM®5005-R is the high-performing professional machine for fully automatic packaging of large capacities.

Technical data:

Vacuum station	2
Performance	up to 10 packages / minute
Welding length	max. 500 mm optional: double welding seam
Standard product size	EURO Block
Dimensions	5150 x 4505 mm

Individual adaptations and the development of special versions enable you to find the perfect solution for requirements of our customers!

In order to discover how your product can best be packaged, simply contact us directly! We will be happy to inform you and find the optimum packaging solution for you!
